

Command:RESET (~)

Shortcut	~
Format	RESET

This command causes the controller to do a software reset. A software reset reinitializes all variables back to their pre-assigned values.

Note: A reset is different from a power cycle. This command does not save positions, commands like [SETHOME](#) require a power cycle instead of a reset.

Additional Notes with usage on Tiger

RESET is usually a "Broadcast command" but can be used as a Card-Addressed Command as well. When addressed to a specific card, it resets that card and then the Comm card (required to communicate with the reset card) without affecting other installed cards.

Example

```
RESET  
:A
```
